

Web Security Dojo

Vložil/a [cm3l1k1](#) [1], 26 Únor, 2010 - 17:36

- [Security](#) [2]

Web Security Dojo is a turnkey web application security lab with tools, targets, and training materials built into a Virtual Machine(VM). It is ideal for both self-instruction and training classes since everything is pre-configured and no external network connection is needed. All tools and targets are configured to use non-conflicting ports and a Firefox proxy switcher is set up to match.

Web Security Dojo v1.0 is now available for free at <http://dojo.mavensecurity.com> [3]

Web Security Dojo is an open source project built on Ubuntu and hosted at SourceForge. It is available in three flavors: a Virtualbox VM, VMWare VM, and a build script which can be used on a standard Ubuntu 9.10 install to produce the Dojo.

Collaboration and contributions are welcomed.

Major highlights:

Targets:

- * [OWASP WebGoat](#) [4]
- * [Damn Vulnerable Web App](#) [5]
- * [Hacme Casino](#) [6]
- * [OWASP InsecureWebApp](#) [7]
- * custom PHP scripts including REST and JSON labs

Tools:

- * [Burp Suite \(free version\)](#) [8] [Thanks to Portswigger for permission to redistribute]
- * [w3af cvs version](#) [9]
- * [OWASP Skavenger](#) [10]
- * [OWASP Dirbuster](#) [11]
- * [Paros](#) [12]
- * [WebScarab](#) [13]
- * [Ratproxy](#) [14]
- * [sqlmap](#) [15]
- * helpful Firefox add-ons

For a quick start grab the VM from <http://dojo.mavensecurity.com> [3] and read the included Readme file and/or watch the intro video at <http://www.youtube.com/watch?v=lum6bSsyj38> [16]
